# FAQ

## {Frequently Asked Questions}

2.

### What is StemWave Therapy?

StemWave is an FDA-listed medical device that uses non-invasive acoustic waves to activate your body's natural healing processes. This technology is designed to address pain and inflammation in musculoskeletal conditions.

### How it works:

StemWave generates focused supersonic waves that stimulate cellular receptors, promoting accelerated healing in damaged tissues. These waves travel at speeds up to 3355 mph and target specific areas of inflammation, arthritis, scar tissue, and poor circulation.

### How Long Does StemWave Therapy Take to Work?

- **Immediate Results:** Often, patients notice an immediate improvement if they qualify as a candidate during the trial/ mapping day.
- **Continued Improvement:** Typically, we see an additional 10% improvement each week. After 8-10 visits, most patients experience a 50%+ reduction in pain, with maximum stem cell recruitment continuing to repair tissue over the next 8-12 weeks.
- **Long-Term Healing:** Full healing can take up to 12-18 months, with continued benefits during that time.

**You should notice significant pain reduction, inflammation relief, and increased range of motion within 15-24 hours after your first treatment**

### How Long Does the Treatment Take?

- **Trial Day:** Approximately 30 minutes for the assessment and first treatment
- **Subsequent Visits:** Typically 5-15 minutes per session, depending on the the treatment area!

# Conditions Treated with StemWave Therapy

3.

**Sports Rehabilitation:** Treatment for repetitive injuries, muscle recovery, and athletic enhancement.

**Neck:** Chronic neck pain, headaches, and trigger points.

**Shoulder:** Rotator cuff injuries, tendonitis, bursitis, arthritis, and frozen shoulder.

**Elbow:** Golfer's and tennis elbow, sprain, and strains.

**Hip:** IT band syndrome, bursitis, piriformis syndrome, sciatica, hip arthritis, and post-surgical pain.

**Spine:** Cervical, thoracic, lumbar, and sacral pain, including herniated discs.

**Hand:** Carpal tunnel syndrome, arthritis, and trigger finger.

**Knee:** Patellar tendonitis, runner's knee, arthritis, bursitis, and post-surgical rehabilitation

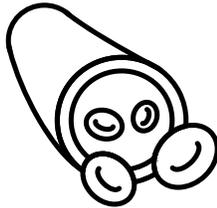

**Rehab/ Post-Surgical:** Preparing for or recovering from surgery

**Chronic Pain:** Relief from long-term pain conditions.

# Why Choose StemWave Therapy?

4.

**Increases Circulation**

**Improves blood flow to the affected areas, aiding in healing.**

**Decreases Pains & Inflammation**

**Targets root causes of musculoskeletal pain.**

**Activates Stem Cells**

**Helps recruit dormant stem cells to repair damaged tissues.**

**No Negative Side Effects**

**Safe, with no recovery time needed.**

**Non-Surgical & Drug Free**

**Provides a natural alternative to invasive treatments and medications.**

**Quick Treatment Time**

**Most treatments take just 10 minutes!**

# What's Included in the \$49 Patient Trial Special?

5.

The \$49 Patient Trial Special offers a comprehensive assessment and initial treatment to determine if you are a suitable candidate for StemWave therapy. Here's what's included:

- **Consultation:** A discussion of your health history and review of any relevant imaging for your region of pain.
- **Examination:** Orthopedic and neurological examination, plus digital range of motion testing.
- **Functional Testing:** Pre and post-treatment tests to measure immediate improvement.
- **Qualification Assessment:** We will identify three key factors to determine if StemWave therapy is right for you:

1. Functional reproducible pain
2. Positive biofeedback response
3. 10% Improvement within 24 hours of trial treatment

- **First Treatment:** The first treatment is provided to help assess your response. This takes between 20-30 minutes.
- **Doctor's Treatment Plan:** Based on the results of the trial, you will receive a treatment plan recommendation, including the estimated number of visits required for optimal pain relief (especially for musculoskeletal conditions).

# How Do I Know If I'm a Good Candidate?

6.

## Qualification Assessment During Initial Visit:

- 1 . Functional Reproducible Pain:** Identifying pain patterns that can be reproduced during movement or functional tests.
- 2 . Positive Biofeedback Response:** During the regional mapping phase (where we apply the StemWave device over different areas), you will experience a biofeedback response if the tissue is damaged, inflamed, or suffering from poor circulation. A positive response suggests you're a good candidate.
- 3 . Immediate Improvement:** A 10%+ improvement in pain and function within the first 24 hours after your trial treatment.

StemWave therapy is particularly effective for those with conditions such as back pain, disc issues, knee pain, arthritis, shoulder injuries, elbow pain, and more. Research shows a success rate of 65-91% for musculoskeletal disorders.

## Do I Have to Be a Chiropractic Patient to Use StemWave Therapy?

No!—StemWave is available to everyone! While many combine it with chiropractic care, you don't need to be a chiropractic patient. We're happy to coordinate with your current healthcare team to support your treatment.
